

# Antimicrobial Treated Devices

## TOUGH and CLEAN

- **TOUGH:** Made durable in order to withstand harsh chemical cleaning products, stringent washings, and UV lights with minimal wear and tear
- **CLEAN:** Inhibit odor-causing bacterial growth on the surface of switches and wallplates in between normal cleanings

# Leviton Antimicrobial Treated Devices

## DESIGNED TO WITHSTAND HABITUAL ABUSE...

Facilities now are requiring more frequent cleaning regimens, often involving harsh chemicals and UV lights. These extreme solutions take their toll on most switches. Leviton Antimicrobial Switches are made of thermoset urea, making them more resistant to chemicals, ensuring a longer service life.

Antimicrobial Treated Devices from Leviton are manufactured by incorporating silver ions (Ag+) as the antimicrobial agent in the product material. This material has been tested to the international standard JIS Z 2801:2000 and has been shown to be effective in reducing the growth of odor-causing bacteria.

Available in a variety of colors!

SWITCHES	Standard Switches 20 Amp, 120/277 VAC				Lev-lok® Modular Switches* 20 Amp, 120/277 VAC
