Project Case Study
Theme Park Hotel
Carlsbad, California

LEVITON®

Sapphire™ Touch Screens

California theme park hotel gets customizable lighting controls to enhance individual spaces.

The Challenge

A Carlsbad, California theme park hotel had specific lighting and control goals for each of the spaces in the hotel it was building. From the lobby, restaurant, and play area, each room had unique lighting needs to enhance the atmosphere, meet energy codes, and bring excitement from the theme park to the hotel. Guests need to feel welcome and the space inviting from the moment they walk through the door.
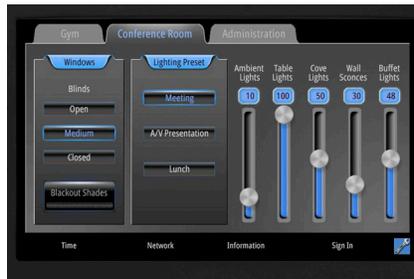

The Installation

Leviton worked closely with the lighting designer and facility managers to create suitable scenes, solutions, and lighting controls for each space to ensure the lighting reflected the goals.

The Solution

Sapphire Touch Screens were installed in each of these spaces while coming in at half the competition's price for a cost-effective, energy-efficient solution.

- Main lobby
- Restaurant & lounges
- Play areas
- Meeting rooms

Sapphire Touch Screens installed in the manager's office gave hotel managers the ability to tailor lighting to the space and promote a welcoming environment that builds brand loyalty and repeat business.

Tailor lighting to promote a welcoming and safe environment and build brand loyalty.

Facility managers can create customizable lighting schedules for different times of the day. These lighting scenes play a vital role in making an excellent first impression.

Sapphire Touch Screens installed in the restaurant and lounges allowed staff to create customized scenes and schedules to adjust to predetermined lighting levels based on the time of day while providing energy savings. Proper lighting in hotel restaurants and lounges creates an unforgettable dining experience that enhances food, service, décor, and atmosphere. It also balances the guest experience, food and beverage presentation, and kitchen functionality.

Facility managers wanted to ensure the children's play areas were brightly lit and could be adjusted for day and evening activities like movies and dance parties.

Sapphire also works with the hotel's DMX fixtures for full-color tuning control. Adjusting the color hues of the fixtures dramatically changes the look and feel of the space to enhance the high-energy areas.

Sapphire Touch Screens

Sapphire provides an elegant, full-scale touch screen control solution for scene control, scheduling, occupancy sensing, daylighting, color tuning, and AV interconnection. Combine the easy system integration of Leviton commercial lighting controls with the flexibility of a customizable user interface and native control convenience.

Leviton offers spec-ready lighting and control solutions for every space in a hospitality application to boost the overall guest experience while increasing both energy savings and repeat business.
